

Technical information

T2022_DID_V_01

Affect: 01.01.2023 FW: >0.8.0

Subject: DID_V / MyLaps X2 Status Screen

The SAS-Technologies Driver Info Display V20 has 2 integrated buttons and a new feature:

The grey marked button can reset the Driver Display, and show the “MyLaps X2 Status Screen’s”

if a X2 RaceLink is Connect and you **push and hold the button** for > 4sec. and release.

The DID then will show you the following Screens: (you can set the brightness with the red button if need)

PAGE 1

P. IN > **12V to 14V** if Main Power is on!

RSSI* > **@TRACK - 60 to - 70 = good !**

- 80 or higher = bad ! @Workshop “NO LINK” will show

SAT* > **Satellite count 12 SAT > 15 SAT need!**

ACC* > **1m is OK!**

A short push of the grey button will scroll to **PAGE 2**

GPS Speed > **0 km/h @ Workshop / Pit / Garage**

the speed should not change when the Car is stop or stand still.

Please note: Back to normal Operation mode is only via POWERCYCLE !

* if you see **unnormal values** > please check your Antenna & Cable, Install place or Contact TIMING or SERIES
The X2 System antenna must mount outside and need 20cm distance to other GPS / RF - TX / GSM / antennas !
